

OREN ROZEN | RESUME

»» I create and design software that helps people and business focus on the things they care about, leaving the rest for the machines.

»»» ABOUT ME

I am working as a developer for a company located in Panama customizes and supports SAP. I have been working as a developer to create Applications/Servers/Mobile apps to enhance the usage and efficiency of our clients using SAP (Retail stores, Suppliers, Hotels, etc.). The primary language we use is C#. I created generic integrations tools for our developers to easily implement SAP/SQL/DBs scenarios to our clients. I have a strong passion for functional programming, and I am trying to apply it as my primary programming technique.

»»» EXPERTISE

C# 8 years experience

- » Developed and maintain tools for our developers to be able to create more productive in creating business integrations (SAP, SQL, ReavenDB, DSL)
- » Maintaining important code base for fiscal printers implementation

Java 3 years experience

- » I have used Java to create plugins for Jira and Confluence which handles the company workflows for finance, sales, consulting and software development departments

SQL 9 years experience

- » Created Integrations between point of sale to/from SAP for big retails (Accounting, Invoices, Credit Notes, Inventory ...)
- » Experience in SAP HANA, Oracle, Postgres

Nix/NixOS 2 years experience

- » Designed the QA server, deployment server and development environments at work.
- » Most of my personal configurations, tools and applications are defined in nix expressions

»»» EMPLOYMENT

Software Architect TopManage, 2010/09-now

- » Plan and design development department workflows - Source Control, Build Server, QA Server and Jira ticketing system(Agile - Kanban)
- » Managed Service Desk and products releases - filter ,organize and prioritize tickets coming from clients, managed products life cycle
- » Trained new developers - FP, OOP, purity, Code Readability, DRY principle, Testing.
- » Created data web server over SAP - this server helps us to access SAP via REST protocol and allow our internal Jiras server to communicate with SAP more straightforwardly, We are using it as well as an interface for external projects to have cloud access to SAP.
