ABOUT ME

I have been working as a developer for a company located in Panama that customizes and gives support for SAP B1. I've created Applications/Servers/Mobile apps to enhance the usage and efficiency of our clients using SAP B1 (Retail stores, Suppliers, Hotels, etc.) The primary language we use is C#. I created state-of-the-art tools for our developers to easily implement SAP B1/SQL/DBs integrations for our clients. I have a strong passion for functional programming, and I am using it as my primary programming technique.

TECHNOLOGIES

- 👥 SAP Business One
- ☑ Jira/Confulance
- 🐳 Docker
- 🖥 Virtual Box
- ⚛ React/React Native/Redux
- 🗂 MVC
- 🛢 SQL Server
- 🛢 ReavenDB
- 🛢 Postgres SQL

EXPERTISE

C#   10 years experience

❯ Developed and managed tools that help our developers to be more productive in creating business integrations (SAP B1, SQL, ReavenDB, DSL).

❯ Maintain a substantial code base for fiscal printers implementation.

Java   5 years experience

❯ Used Java to create plugins for Jira and Confluence, which handles the company workflows for finance, sales, consulting, and software development departments.

SQL   10 years experience

❯ Created integrations between the point of sale to/from SAP B1 for big retails (Accounting, Invoices, Credit Notes, Inventory, etc.).

❯ Experienced with the following DBs: SQL Server, SAP HANA, Oracle DB, and Postgres.

Nix/NixOS   4 years experience

❯ Designed QA servers, deployment servers, and development environments.

❯ Defined tools, applications, and configurations with nix expressions as part of my personal growth.

TOOLS

🖵 Visual Studio   🖵 Vim   🖵 VS Code

⑂ Git   ⑂ SourceTree

❯_ Nix/NixOS   ❯_ Terminal/Bash

</> F#   </> Haskell   </> Elm

ACTIVITIES

🏀 🎸 🖥

EMPLOYMENT

Software Engineer   TopManage, 09/2010-Present

❯ Created data web server over SAP B1 to help the company to access SAP B1 via REST protocol and allow our internal Jiras server to communicate with SAP B1 more directly, it is being used as an interface for external projects to have cloud access to SAP B1.

❯ Plan and design software development workflow, which includes Source Control, Build Server, QA Server, and Jira ticketing system (Agile/Kanban).

❯ Trained new developers in the following: FP, OOP, Purity, Code Readability, DRY principle and Testing.

❯ Filtered, organized, and prioritized tickets coming from clients through Serivce Desk and managed the life cycle of each product.
