OREN ROZEN | RESUME

> I create and design software that helps people and business focus on the things they care about, leaving the rest for the machines.

ABOUT ME

I am working as developer for company located in Panama selling SAP.
I have been working as a developer to create Applications/Servers/Mobile apps to enhance the usage and efficiency for our client using SAP (Retail stores, Suppliers ...).
The main language we were using is C#, with that I had to create generic integrations tools for our developers to be able to use to implement SAP/SQL/DBs Scenarios to our clients.
I have a strong passion for functional programming and I am trying to apply it as my main programming technique.

EXPERTISE

C#   8 years experience

> Developed and maintain tools for our developers to be able to create more productive in creating business integrations (SAP, SQL, ReavenDB, DSL)
> Maintaining important code base for fiscal printers implementation

Java   3 years experience

> I have used Java to create plugins for Jira and Confluence which handles the company workflows for finance, sales, consulting and software development departments

SQL   9 years experience

> Created Integrations between point of sale to/from SAP for big retails
(Accounting, Invoices, Credit Notes, Inventory ...)
> Experience in SAP HANA, Oracle, Postgres

Nix/NixOS   2 years experience

> Designed the QA server, deployment server and developement enviorments at work.
> Most of my personal configurations, tools and applications are defined in nix expersions

EMPLOYMENT

Software Architect   TopManage, 2010/09-now

> Plan and design development depertment workflows - Source Control, Build Server, QA Server and Jira ticketing system(Agile - Kanban)
> Managed Service Desk and products release - filter and organize tickets coming from client, sechduling release
> Trained new developers - Unit Testing, DRY pricenple, OOP, FP, purity, Code Readablity.
> Created data web server over SAP - this server helps us to access SAP via REST protocol and allow our internal Jiras server to comuncate with SAP in a native way, and to be used with external project in order to cloud access SAP.
